

STEFAN STRAINOVIC | CV

Recent M.Sc. in Applied Mathematics with experience in statistical modeling, data analysis, and ML-driven solutions. Experienced in both academic research and industry applications, with hands-on expertise in developing credit risk assessment models, transaction classification systems, and statistical research in oncology.

EXPERIENCES

Credit Risk ML Engineer (Python) Karmen, July 2024 - January 2025

- Credit Risk Model Development:** Researched, Built and Implemented ML models for loan risk assessment, integrating them into a streamlit-based UI and achieving high 90% accuracy, enabling real time risk assessments.
- Transaction Classification:** Developed a TF-IDF-powered pipeline to train client-specific transaction classification and clustering models, enabling the rapid labeling of thousands of transactions for each client.
- Bank Statement Classification & Additional Tools:** Researched CNN/TF-IDF methods for unknown bank documents, and developed internal UIs, dashboards, and bug fixes to enhance overall productivity.

Research Assistant (Oncology) (R) ENSICAEN, March 2023 - July 2023

- Conducted statistical analysis and modeling to investigate T lymphocyte cell sub-types following X-ray and Proton brain irradiation.
- Developed multiple regression models to explore correlations between treatment variables and lymphocyte concentrations, showing the impact of irradiation variables.
- Analyzed results and drew conclusions regarding the impact of radiation therapy on lymphocyte sub-types, optimizing treatment variables.

Project Manager/Producer (Volunteer) Gazamo Ltd., 2011 - 2016

- Led and coordinated multiple video game map design projects, overseeing a international team of artists.
- Developed project plans and timelines, defined project scopes and objectives to ensure project milestones were met within budget and timeline constraints.
- Actively participated in the design and development process, contributing to the creation and refinement of the virtual environments to meet project objectives.

EDUCATION

Master of Applied Mathematics (Statistics) University of Caen, October 2024

- Focus on developing complex statistical models, applying quantitative methods for decision making, and orchestrating data governance, cleaning, and analysis workflows.
- Extracurricular Activities: Volunteered at the ESN as (Erasmus Student Network) student association as a regional representative and a event organiser.

Bachelor of Mathematics University of Paris Diderot, July 2022

- Comprehensive training in fundamental and applied mathematics—spanning analysis, algebra, probability, and numerical methods.
- Interdisciplinary studies in art, linguistics and language acquisition.

PROJECTS

Brain Tumor Classification (ML)(Python) Caen, January 2024 - February 2024

- Conducted a comprehensive study on brain tumor classification using machine learning, focusing on MRI image analysis and reaching high 98% accuracy.
- Used Convolutional Neural Networks (CNNs) with the implementation of Transfer learning using various models(VGG16 - VGG19).

INTERESTS

- Reading:** Behavioural sciences | Neuroscience | Mathematics | Fictional
- Sculpting:** Paper(Books) | Wax | Metal | Clay
- Computing and Electronics:** Arduino projects | Repair and Tinkering
